VCM3
164-R9865

The VCM3 is Ford's new Vehicle Communication Module (VCM) and is required for use of IDS, and is the recommended VCI for use with both FDRS and FJDS. Unlike the VCMII and VCMM, the VCM3 is capable of communicating on both the J1708 and J1939 networks. This allows for a higher level of diagnostics on Medium Duty Trucks when paired with the Rotunda Medium Duty Truck DLC adapter and manufacturer specific software. We trust this upgrade will help you service the needs of your customers. It's also capable of performing module reprogramming at increased speeds on vehicles such as the upcoming 2021 F-150 and Bronco which are equipped with the new CAN-FD network.

Please note: The VCM II is still capable of performing full dealership level diagnostics on 1996 to present Ford and Lincoln vehicles when used with Ford Diagnostic Software including IDS and FDRS.

Normal Price: ~~$1,299~~

Normal Price: ~~$3,499~~

Code: FFNQ4
Promo Price: $3,199

Ford Diagnostic Software

The Ford IDS and FDRS software is the only software that provides complete diagnostic coverage, including module programming and key programming of 1996 to current and future Ford and Lincoln vehicles. The IDS/FDRS will operate on PC platforms meeting the minimum specifications and having a valid software license subscription. IDS/FDRS software license subscriptions are available online at the PTS, Ford Fleet, or Motorcraft service website.

Vehicle Communication Module 3 (VCM3)

The VCM3 communicates with Ford and Lincoln vehicles via the 16-pin diagnostic link. An IDS software license subscription (sold separately) provides access to the software which uses the VCM3 hardware to perform vehicle diagnostics. The VCM3 will operate as a Customer Flight Recorder (CFR) with an optional pendant cable 164-R9806 to replace the functionality of the Vehicle Data Recorder (VDR). Wireless functionality preferred for all IDS functions including module reprogramming.

Panasonic Toughbook FZ-55

This semi-rugged laptop computer is a Ford tested and approved laptop from Rotunda that meets or exceeds the specifications to run Ford diagnostic. The FZ-55 has been thoroughly tested and comes pre-loaded with both IDS and FDRS software packages. See item 164-R9816 for current specifications.

Software License Purchase and Product Support Additional resources including software license purchase, software download, user's manuals, troubleshooting guides, system requirements, support and more are available by accessing the customer resource pages shown below. Aftermarket and Fleets Customers - https://www.motorcraftservice.com/ and select Diagnostic Tool Support from the top navigation menu. Dealers or customers with a PTS subscription - http://www.proservicetech.com/ and select Rotunda > Diagnostic Tool Support from the top navigation menu for IDS license and product information.

For additional product or license technical support please fill out a TIS request form found under the technical assistance menu at OneRotunda.com
